Scaling Global South Climate Solutions | Green Schools Climate Action Initiative - Nigeria

We empower students and communities in Kaura Namoda through tree planting and climate education to build greener, more resilient communities

Challenge
Climate change, deforestation and rising temperatures threaten Kaura Namoda, affecting students and communities through environmental degradation and low climate awareness.

Solution
We combine climate education with tree planting in schools, engaging students, teachers and volunteers in practical, low-cost and replicable climate action.

Impact
Pilot implementation: 25 tree seedlings planted across participating schools and community locations, with students and volunteers engaged in climate education and environmental action.

Partners
RiseBridge Network (Lead); Relief Without Borders (Community Partner); Participating Schools (Implementation); Community Volunteers (Support).
