Scaling Global South Climate Solutions | Climate Education In Primary Schools & Community Libraries - Uganda

Climate Education In Uganda's Primary Schools & Community Libraries.

Challenge & Solution

Bridging the gap towards accessing climate literacy amongst children. Pause Conservations is on a mission to reach 1 million children with environmental knowledge by 2030 with a climate education program that is reaching children through story-led reading sessions, mindfulness and nature themed interactive play. Our flagship illustrated storybook series titled "Chali's Adventures On Lake Victoria" simplifies complex environmental concepts into interesting conversations for children.

Impact

In less than two years, 962 children across Uganda have been empowered with vital environmental literacy and a total of 182 illustrated storybooks have been placed in children's hands with the support of individual donations from climate education enthusiasts across the world and direct storybook purchases within Uganda.
